Group Project 6: Final Prototype & Storyboard

Part 1: Final Prototype:

Changelog: Changed the life tracker app to utilize a slide/scroll feature instead of the previous clutter of buttons with poor reception. During testing, users fumbled with the buttons and many clicks so we designed a system with less clicks, the slide/scroll feature for life totals. Added a settings button to the life tracker app. Changed the website to load the entire page under the assumption that constructed is selected, and allow users to switch to limited mode to avoid the issue of a partially loaded page. Added “edit decks” button to the user profile for quick and easy access. The ability to edit showed itself to be an integral part of the system during testing so we chose design that into the profile page by having an easy access link.

- **Usability Issues:**

| Usability Issue: | Resolution: |
|--|---|
| Cumbersome life total change buttons | Scroll/slide wheel feature for changing life totals |
| App can't change and is fairly simple | Added a settings button for customization. |
| Users come to app for different reasons, may initially be brought to a page they don't use | Users can toggle between constructed and limited mode, allowing them to customize which page they are brought to. |
| Users have hard time editing inputted decks | Added links to the edit deck page in more locations to facilitate navigation to that page. |

Part 2: Video Storyboard:

The bottom middle frame is the person being annoyed.

The top left frame is the person still being annoyed.

The bottom left frame is the person being mildly happy.

Recitation Section Presentation:

We presented our storyboard in our recitation section 101 at 8:00am on Friday morning with Annika. Both Thomas Quinn Langsfeld and Tyler Mauer presented. We received no feedback. I, Thomas Quinn Langsfeld, asked for feedback after the presentation and all were silent. As such, our storyboard has not changed.
